

DiracTrace: Expressions that mix D-, 4- and D-4- dimensional quantities are forbidden in Dirac matrix chains unless you are using the t'Hooft- Veltman scheme. For every other scheme, please recheck your input expressions and ensure that all matrices, spinors and tensors are purely D- dimensional. You might want to use `FCGetDimensions[exp]` to find the offending terms and fix them by hand or employ `ChangeDimension[exp,D]` to convert the whole expression to D- dimensions. If you explicitly intend to use the t'Hooft- Veltman scheme, please activate it via `FCSetDiracGammaScheme["BMHV"]`.
