

DiracTrace: Expressions that mix D –, 4 – and $D-4$ –dimensional quantities are forbidden in Dirac matrix chains unless you are using the t'Hooft–Veltman scheme. For every other scheme, please recheck your input expressions and ensure that all matrices, spinors and tensors are purely D –dimensional. You might want to use `FCGetDimensions[exp]` to find the offending terms and fix them by hand or employ `ChangeDimension[exp,D]` to convert the whole expression to D –dimensions. If you explicitly intend to use the t'Hooft–Veltman scheme, please activate it via `FCSetDiracGammaScheme["BMHV"]`.
